(54) REMOVAL OF HARMFUL EFFECT FROM NITROGEN TRIFLUORIDE

(57) Abstract:

PURPOSE: To remove harmful effects in an efficient, easy and safe way without raising the problems of air pollution and working environment by a method wherein the gas contg. nitrogen trifluoride is mixed with water vapor and the nitrogen trifluoride is decomposed by reaction with water.

CONSTITUTION: The gas contg. nitrogen trifluoride (NF3) is mixed with a 100% or inert gascontg. water vapor produced by using distilled water. This mixture is then introduced into a reactor composed of a cylindrical reacting container and a heating device provided around it to undergo gas-phase reaction at a temp. of at least 300°C. The reaction 2NF3+5H2O→2NO +HNO3+9HF takes place in the reactor and HNO3 and HF are allowed to remain therein but NO is removed therefrom by washing with alkali, after oxidation with O3. Being a gas or liq., these products offer no problem of clogging the reacting device. This method permits an efficient and easy treatment of NF3, without forming the by-product such as the gas having explosiveness, toxicity, etc., leading to a safe removal of the harmful effects.
